

Energy for Sustainable Development

The Journal of the International Energy Initiative

Energy for Sustainable Development (ESD), the journal of the International Energy Initiative (IEI), views energy as an instrument for sustainable development. *ESD*'s peer-reviewed articles are concerned either with energy technologies, or with energy goals, policies, strategies, and projects.

ESD has been supporting IEI's activities of information, training, analysis, advocacy, and action (INTAAACT), by being a medium for information exchange, for conveying the results of analytical and training efforts, and for sharing the lessons learnt from field projects.

Address:

Energy for Sustainable Development,
Editorial & Publishing office,
25/5 Borebank Road, Benson Town,
Bangalore 560 046,
India

Website: www.ieiglobal.org/esd.html

With the issue of December 2006, *ESD* has completed ten volumes of publication. Several of the 46 issues published so far have had a specific focus, either themes such as modernised biomass technologies, clean cooking, renewable energy policies, and international bio-fuels trade, or selected countries -- Brazil, China, and India, among others. These are all presented in this collection in chronological order, and with an additional search programme that assists in locating articles by author and subject.
